***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, 22 and 23, drawn to discharge lamp, classified in class 313, subclass 344.
- II. Claims 13-21 and 24, drawn to method of forming a coil for a fluorescent lamp, classified in class 445, subclass 51.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the case of claims 13 and 24, instead of winding an overwind wire around the current carrying wire, one could attach an end of the overwind wire to a point on the current carrying wire and then rotate the current carrying wire while moving the overwind wire to the left or right to cover the current carrying wire with the overwind wire. The same procedure could be invoked for creating the second coiled structure i.e. the first coiled structure could be attached to a point on the cylindrical member and then the cylindrical member could be rotated while the second coiled structure is moved to the left or right to create the second coiled structure.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Ann M. Skerry on April 9, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
